

How to use Software Center

Installing software onto your University Windows PC

As standard we will install key software, such as Microsoft Office, on your machine when you receive it. Further to this, the Software Center holds many applications which you can self-install, without needing to contact the IT Helpline and have a technician call out.

How to find and access Software Center

- 1 Click **Start**, type **Software Center** in the search box and click on the icon that appears in the search results
- 2 The main screen is **Applications** and here you'll see everything that's available to install

How to install software

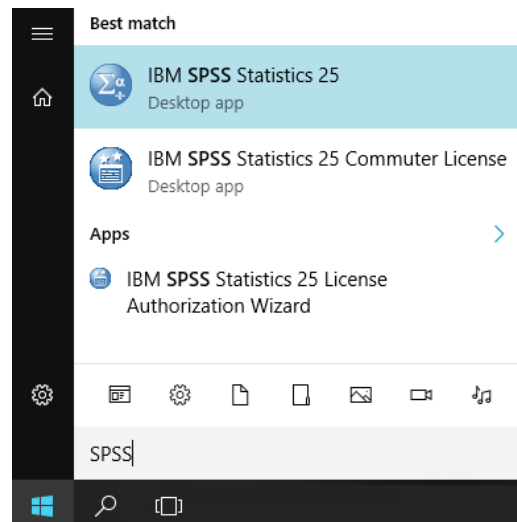

- 1 From Software Center, find the software you wish to install and left-click once on it
- 2 You will see some information about the application
- 3 Before clicking **Install**, look at the **Restart Required** field

Restart Required: No	This means you will be able to continue working as normal whilst the installation takes place.
Restart Required: Yes or Might be Required	Means that you may be prompted to restart your computer, and it is recommended that you close other programs whilst the install takes place. Depending on the estimated time you may decide to do this at a more convenient time.

- 4 Click **Install** and the application will begin to install.

To check software you've installed:

- 1 Click the **Installation Status** menu
- 2 You will see the newly installed software has been added to the list along with any other additional software present on your computer
- 3 To open that software click **Start** and type the name of the software in the search box
- 4 Click on the icon that appears in the search results and the application will load.

How to change your Software Center Business Hours

Software Center has default Business Hours to use as a reference for when to install applications for you. To ensure you're not interrupted, you can amend these hours to a pattern that suits you.

- 1 Click **Start**, type **Software Center** in the search box and click on the icon that appears in the search results
- 2 Select **Options**
- 3 In the **Work Information** screen you will see your Business hours displayed as 05:00 to 22:00 by default

Work information

Indicate the hours that you typically work. Some software can be scheduled to install outside your business hours. Make sure that your settings allow at least four hours each day for system maintenance tasks.

Business hours: From through

Days: ☐ Sunday ☒ Monday ☒ Tuesday ☒ Wednesday ☒ Thursday ☒ Friday ☐ Saturday

- 4 Change these times to suit your working pattern - we recommend 08:00 to 18:00 as this gives the broad spectrum of the standard working day
- 5 Click **Apply**
- 6 Now any software you schedule to install will not begin until it's outside of those hours.

IT Support - open 24 hours, 365 days a year
