

1. Introduction

This guide covers recommended connection methods for accessing Northumbria University's HPC and Linux resources from both on & off Campus devices. Those resources include:

- HPC: Oswald (FEE) & Crick (HLS)
- Linux Servers: Apollo, Babbage, Cauchy, Dirac, Euler, Faraday, Rutherford, Armstrong & Cairns
- Staff Workstations

2. Off-Campus

2.1 MyAccess (Citrix)

Note: For staff accounts ONLY

The easiest and most accessible way of connecting to the University's HPCs/ Linux resources is using MyAccess (Citrix).

Firstly, follow the instructions for setting up MyAccess & Citrix Receiver here: <https://www.northumbria.ac.uk/-/media/corporate-website/new-sitecore-gallery/services/it-services/documents/pdf/myaccess---getting-started-guide-for-students.pdf>

Once installed, login in: <https://myaccess.northumbria.ac.uk/Citrix/UNNWeb/>

From the **HOME** tab – you can connect to either your own personal PC (if it has been setup previously and available to you) or the Staff Desktop. These will allow you to use locally installed ssh clients such as PowerShell.

From the **APPS** tab – you can launch ssh client app, PuTTY and input fields as shown below (substituting the username and target campus system as required).

2.2 SSH Proxy Service

An SSH Proxy service has been implemented to allow users to connect from external systems anywhere in the world to internal University campus based HPC/Linux systems which users are authorised to use, using ssh protocols. This will allow login using ssh and file transfer using SFTP (Secure File Transfer Protocol) and SCP (Secure Copy Protocol).

Authentication to the proxy uses RSA private and public key pairs only. Password access is disabled to prevent brute force password attacks. SSH keys also facilitate automatic password-less file transfer required for some research activities.

This connection type is best suited to users trying to connect from off Campus device, both personal and University owned.

If you require SSH proxy access, please raise an IT request via the usual methods: <https://northumbria.service-now.com/selfservice>

3. On-Campus

3.1 UNIX/ Linux/ MacOS

Launch the UNIX/ Linux terminal and use the **ssh** command:

```
ssh <username>@<campus system>
```

E.g

```
ssh osw_w123456789@oswald
```

3.2 Windows

Launch the PowerShell terminal and use the **ssh** command:

```
ssh <username>@<linux system>
```

E.g

```
ssh osw_w123456789@oswald
```

Note: If you receive an error, it is possible that the ssh client is not installed. Please contact the Helpline for assistance/ installation if yours is a University device. Otherwise see here for installing ssh in PowerShell: https://docs.microsoft.com/en-us/windows-server/administration/openssh/openssh_install_firstuse
